Yulu Bike Rental Analysis — Key Insights

- Total rentals reached **2,085,476**, including **1,693,341 registered** and **392,135 casual** rentals.
- Registered customers account for approximately **81%** of rentals, while casual customers account for approximately **19%**.
- Rental demand peaks around **17:00**, making the late afternoon/evening period the strongest rental window.
- Monthly rental demand rises from January through June, with June showing the highest monthly demand before remaining relatively high through October.
- Among seasons, **Fall** records the highest rental demand at **640,662**, followed by Summer, Winter and Spring.
- Working days generate substantially more rentals (**1,430,604**) than weekends/holidays (**654,872**).
- Clear/partly cloudy weather records the highest rental volume at **1,476,063**, while heavy rain/snow has very low rental demand.
- The dashboard supports filtering by **season, year and holiday status** to compare rental behavior across different conditions.

Business Recommendations

- Ensure sufficient bike availability and operational capacity around the **17:00 peak rental hour**.
- Focus demand-generation initiatives on lower-performing periods while maintaining capacity during high-demand months and seasons.
- Use the strong registered-customer base to develop retention and repeat-rental initiatives.
- Consider weather-sensitive operational planning, particularly during periods of heavy rain or snow when demand falls sharply.
- Use year, season and holiday filters to identify changing demand patterns before making staffing and fleet allocation decisions.
